

For descriptive text structure

Student Sample

*she starts off with the big idea, then goes more in depth as she goes	
Active Earths	
One central idea is that the Earth changes over time	
Cool Planet	Core to Crust
Introduces reader to how Earth formed	Introduces and then → layers and compares to a boiled egg
Giant Jig Saw	Slow going
She introduces tectonic plates and explains the cause and effect of the core moving the tectonic plates	She explains how the causes of the plates that are moving, and the effect of the land mass called Pangaea to move into the continents
Collision / Also introduces convergent boundaries	Pull and Push
Introduces what happens when two plates collide, The cause is when the plates collide. The effect is it creates earthquakes, volcanoes, mountains and other geological formations	Introduces the divergent boundary and the transform fault. The cause is when two plates move apart, the effect is it creates back also give examples of formations
Ring of Fire	Into the Mantle?
It describes what the Ring of Fire is and what would happen if the plate boundaries more severe. This piece of writing is a more detailed description what plate boundary action really is.	It describes how far scientists have drilled in the crust and what they expect in the future, and concludes. *starts with scientists ends with scientists

As she goes into details we start to analyze more detail and what more facts
